According to our (Global Info Research) latest study, the global Methyl Glycolate market size was valued at US\$ 35.93 million in 2025 and is forecast to a readjusted size of US\$ 750 million by 2032 with a CAGR of 55.0% during review period.

Methyl glycolate is an organic compound with the chemical formula $C_3H_6O_3$. It is an organic solvent and an important chemical intermediate. It can be prepared by methods such as esterification of glycolate and hydrogenation of dimethyl oxalate.

As for types, purity?99% type accounts for a higher share, accounting for 52.23% in 2023, and it is expected to increase steadily year by year. As for applications, degradable plastics are the largest application market, accounting for more than 80% of market revenue in 2023. China is the main production and consumption area of ??this product. The development of the coal-to-ethylene glycol industry has formed a large-scale production route for producing PGA by hydrogenating dimethyl oxalate (DMO) to methyl glycolate (MG). At present, a large number of production capacities under construction and planned in China are basically based on this technical process. Starting from 2020, the production capacity of methyl glycolate is expanding and this trend is expected to continue in the coming years.
