Abstracts

According to our (Global Info Research) latest study, the global Methyltris(methylethylketoxime)silane (MOS) market size was valued at US\$ 352 million in 2025 and is forecast to a readjusted size of US\$ 453 million by 2032 with a CAGR of 3.7% during review period.

Methyltris(methylethylketoxime)silane (MOS) is a key organosilicon chemical, a colorless liquid used primarily as a neutral curing agent (crosslinker) in silicone sealants, adhesives, and rubbers, reacting with moisture to form strong, durable silicone networks. It enhances bonding and properties like mechanical strength, allowing silicone products to bond to glass, plastics, and ceramics, releasing 2-butanone oxime (MEKO) as it cures.

In 2025, global production of methyltris(methylethylketoxime)silane reached 157,000 metric tons, with an average selling price of USD 2,181 per ton and total installed capacity of approximately 210,000 metric tons. The industry gross margin is about 20%–30%. The cost structure consists of approximately 65% direct materials, 20% manufacturing overhead, 11% fuel and power, and 4% labor. The industry chain includes upstream raw materials such as chlorosilanes and methyl ethyl ketoxime, while downstream applications are mainly as crosslinking agents for silicone sealants, adhesives, and coatings.
