Magnesium alloy vascular stent is a vascular stent made of magnesium alloy material. Magnesium alloy can be gradually degraded in the human body and eventually absorbed or excreted by the body. This feature allows the magnesium alloy vascular stent to complete its task of supporting blood vessels and preventing restenosis, while avoiding the problems of chronic inflammation and restenosis that may be caused by the long-term presence of traditional metal stents in the body.

This report is a detailed and comprehensive analysis for global Mg Alloy Vascular Scaffold market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets.
