## Abstracts

According to our (Global Info Research) latest study, the global Micro Coaxial Cable Connector market size was valued at US\$ 111 million in 2024 and is forecast to a readjusted size of USD 138 million by 2031 with a CAGR of 3.1% during review period.

Micro-Coaxial Connectors are mainly used to connect digital signals between module boards by the differential transmission method using micro-coaxial cables. To perform appropriate signal transmission, the center conductor which transmits the signal, needs to be connected to the signal circuit on the board via the contacts of the connector. The outer conductor of the cable needs to be electrically connected on the board via metal parts of the connector referred to as the Shell. The electrical connection of the outer conductor to board through the connector shell is called 'grounding'.

The micro coaxial cable connector is becoming increasingly crucial in the evolving landscape of electronic connections. With rapid advancements in fields such as mobile communication, wireless networks, medical devices, and consumer electronics, there is a growing demand for small-sized, high-performance connectors. Micro coaxial cable connectors are gaining prominence due to their exceptional performance in high-frequency transmission and resistance to interference, making them an indispensable component in various precision instruments, mobile devices, and communication equipment. Furthermore, as the Internet of Things (IoT) and 5G technology find widespread applications, the need for even smaller and more reliable connectivity solutions is on the rise. As a result, the micro coaxial cable connector market is poised to continue its growth trajectory in the coming years.
