A Micro LED HUD (Head-Up Display) is an automotive system that projects critical driving information directly onto the windshield or a separate combiner using Micro LED technology. This technology leverages the inherent advantages of Micro LEDs—such as exceptionally high brightness (often exceeding 10,000 nits), high contrast ratio, and superior reliability—to display clear, readable information in various lighting conditions, including direct sunlight. It is primarily used in advanced driver assistance systems (ADAS) and augmented reality (AR) HUDs to enhance driving safety and provide an immersive user experience.

The upstream part of the industry chain consists of suppliers of core components like Micro LED chips and glass substrates. The midstream is dominated by panel manufacturers such as BOE, TCL CSOT, and Tianma, who are responsible for research, development, and production of the HUD modules. The downstream segment involves integration into vehicles by automakers, with panel makers increasingly acting as Tier-1 suppliers, providing system-level solutions directly to car companies.
