According to our (Global Info Research) latest study, the global Microbial Deodorant market size was valued at US\$ 709 million in 2024 and is forecast to a readjusted size of USD 934 million by 2031 with a CAGR of 4.1% during review period.

The basic principle is to use microorganisms to absorb the malodorous substances in dissolved water into the microorganisms themselves, and degrade them through the metabolic activities of microorganisms. Microbial deodorization can be divided into three stages:

? Dissolution process of malodorous gas, that is, transfer from gas phase to liquid phase;

?The malodorous components in the aqueous solution are adsorbed and absorbed by microorganisms;

? The malodorous components entering the microbial cells are decomposed and utilized by the microorganisms as nutrients, so that the pollutants can be removed.
