According to our (Global Info Research) latest study, the global Microgravity as a Service market size was valued at US\$ 96 million in 2025 and is forecast to a readjusted size of US\$ 205 million by 2032 with a CAGR of 11.2% during review period.

Microgravity as a Service refers to the standardized, on-demand commercial resource that provides microgravity environments for scientific experiments, technology verification, and materials manufacturing under in-orbit or suborbital conditions to various users. Its core lies in a professional service provider offering a complete solution including standardized payload interfaces, launch opportunities, in-orbit operation, and data downlink, while users focus on the payload design and objectives of their own experiments. This model aims to significantly reduce the barriers and costs of using microgravity environments and is a key emerging industry driving the space economy from government-led to commercialized and large-scale development.

The Microgravity as a Service market is undergoing a critical expansion phase, transitioning from government-led to commercially driven growth. Traditionally, services based on the International Space Station (ISS) primarily catered to national research projects. However, in recent years, commercial orbital flights have become more flexible and affordable standardized products, significantly lowering the entry barriers for businesses, research institutions, and universities. Simultaneously, multiple companies are racing to build commercial space stations, aiming to provide long-term, dedicated orbital experimental and manufacturing capabilities, driving the market towards large-scale development. Currently, the customer base has expanded from pure research to industries such as biopharmaceuticals and new materials, seeking disruptive technological breakthroughs. However, the overall market size remains limited, and its

maturity depends on the timely deployment of on-orbit facilities, continued cost reductions, and the successful validation of high-value commercial products.
