According to our (Global Info Research) latest study, the global Micromotor Rotor Dynamic Balancing Machine market size was valued at US\$ 62.8 million in 2024 and is forecast to a readjusted size of USD 100 million by 2031 with a CAGR of 6.2% during review period.

Micro Motor Rotor Balancing Machine is a device specially used for balancing and adjusting micro motor rotors (such as mobile phone motors, power tool motors, household appliance motors, etc.). Since micro motors are widely used in various consumer electronic products and small devices, ensuring the balance of their rotors is an important part of ensuring efficient and stable operation of motors. Unlike traditional motor rotor balancing machines, micro motor rotor balancing machines have the characteristics of small size, high precision, and high degree of automation. They are suitable for production lines of precision micro motors and small components. It detects the imbalance of the rotor during rotation and corrects it by adjusting the rotor weight, removing the unbalanced part, etc. to ensure the balance of the rotor.
