Microscope adhesive slides, as the name implies, are based on ordinary slides, by coating a layer of glue, self-adhesive stickers or undergoing special process treatment (such as with a persistent cationic charge) on its surface to enhance the adhesion to the sample. This kind of slide is mainly used for observing substances that need to adhere to the solid surface under the microscope, such as cells, pollen, microorganisms, etc., as well as those complex or non-transparent samples that are difficult to place directly on the slide. Microscope adhesive slides are widely used in many fields such as scientific research, medical diagnosis, and industrial testing. In biological research, it is often used to observe cell morphology, structure, and cell-to-cell interactions; in medical diagnosis, it is used for the preparation and observation of pathological sections; in industrial testing, it can be used to detect the microstructure or defects on the surface of materials.

Microscope adhesive slides are widely used in many fields such as biology, medicine, and materials science. In the field of scientific research, it is an important tool for observing and analyzing the microscopic world; in the medical field, it is used in key links such as pathological diagnosis and disease treatment.
