## Abstracts

According to our (Global Info Research) latest study, the global Microwave Ablation Surgical Robot market size was valued at US\$ 47 million in 2024 and is forecast to a readjusted size of USD 99 million by 2031 with a CAGR of 11.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The microwave ablation surgical robot is an advanced medical device that combines microwave ablation technology with robotic technology. The microwave ablation surgical robot uses the energy generated by microwaves to transmit to the lesion area through a special ablation needle, causing the molecules in the surrounding cell tissues to vibrate at high speed, collide and rub against each other, and generate high temperature in a short time, thereby causing the cell tissues to coagulate and necrotize, achieving the purpose of destroying the lesion. This technology has the advantages of minimally invasive, safe, definite efficacy, and fast speed, and is particularly suitable for the treatment of solid tumors and high-risk lung nodules.
