The mitral bioprosthesis is a medical device used in heart valve replacement surgery, specifically designed to replace a damaged or dysfunctional native mitral valve. The mitral valve is an important valve located between the left atrium and the left ventricle, and its main function is to ensure unidirectional blood flow in the left chamber of the heart. The bioprosthesis is designed to mimic the structure and function of the natural mitral valve, providing stable blood flow control and reducing blood backflow, thereby restoring the normal function of the heart.
