Abstracts

According to our (Global Info Research) latest study, the global Mobile Digital Radiography market size was valued at US\$ 6252 million in 2023 and is forecast to a readjusted size of USD 15180 million by 2030 with a CAGR of 12.4% during review period.

Mobile Digital Radiography can quickly acquire and confirm photographic images a few seconds after exposure, eliminating the complicated procedures of traditional film washing and IP board information reading. Images can be processed on site, transmitted over the network, and printed, which is efficient, fast, and more direct. From the perspective of product type, products can be divided into manual and electric, among which electric accounts for the largest proportion due to its superior performance and has a trend of continued improvement.

From the perspective of product market application, mobile DR (Mobile Digital Radiography) can be used in radiology, orthopedics, wards, emergency rooms, operating rooms, ICUs, etc., among which radiology and orthopedics have a larger share, and the two will remain at this proportion in the future.

At present, the world's major manufacturers include Carestream, Shimadzu, Siemens, GE Healthcare, etc. The top five manufacturers account for more than 40% of the sales share. It is expected that the industry competition will be more intense in the next few years.

From the perspective of raw material supply, only some manufacturers in the world have the ability to manufacture core components, and most companies adopt the model of global procurement of parts and assembly; currently, only Wandong in China has the ability to produce all core parts of mobile DR, and it is expected to achieve import substitution in the future.

North America is the world's largest mobile DR consumption region, with sales accounting for 41% of the world. The Chinese market has changed rapidly in the past few years, and the market accounts for about 16% of the world.

Market development trend

Diversification: The mobile DR market will show a diversified development trend, including diversification in product types, application fields, and technological innovation.

Intelligence: With the continuous development of artificial intelligence technology, mobile DR equipment will achieve more intelligent image processing and diagnosis functions.

Greening: Under the concept of sustainable development, mobile DR companies should focus on environmental protection and energy conservation, reduce product energy consumption and emissions, and improve resource utilization.
