According to our (Global Info Research) latest study, the global Mobile PCB Board market size was valued at US\$ 29762 million in 2025 and is forecast to a readjusted size of US\$ 36937 million by 2032 with a CAGR of 3.1% during review period.

Mobile PCB boards are essential components inside smartphones, responsible for electrical interconnection, signal transmission, and functional integration among key modules such as processors, memory, RF systems, cameras, power management, and displays. Product forms include rigid PCBs, HDI PCBs, flexible PCBs (FPCs), and rigid-flex PCBs, all of which must meet stringent requirements for high routing density, high-speed and high-frequency signal integrity, compact form factors, and long-term reliability. Upstream supply involves copper-clad laminates, copper foil, resin systems, flexible substrates, and chemical materials, while downstream customers are primarily global smartphone OEMs and their EMS/ODM manufacturing partners. Reflecting a balance between cost pressure from end customers and rising technical barriers, mobile PCB boards typically generate moderate gross margins, generally in the range of approximately 15%–20%. Conventional rigid PCBs tend to be at the lower end of this range, while HDI, advanced FPC, and rigid-flex PCBs usually achieve above-average margins, with selected high-end product lines exceeding 20%.
