Abstracts

According to our (Global Info Research) latest study, the global Mobile Precooling Unit market size was valued at US\$ 1029 million in 2025 and is forecast to a readjusted size of US\$ 1528 million by 2032 with a CAGR of 5.9% during review period.

Mobile precooling unit is portable, independent refrigeration systems used to quickly and flexibly lower the temperature of agricultural products at their source (field, collection point) after harvesting, before transportation, or before storage. This removes field heat, delays spoilage, maintains quality, and extends shelf life, making them crucial post-harvest processing equipment. Demand primarily stems from the rigid quality assurance requirements of the high-value fresh agricultural product (fruits, vegetables, flowers) supply chain, aiming to address the quality deterioration and losses caused by the inability to cool products in a timely manner from harvest to cold storage or processing plants. The upstream supply chain includes refrigeration equipment manufacturers (providing compressors and evaporators), chassis suppliers, and temperature control and intelligent system integrators. Downstream, it directly serves large farms/planting cooperatives, agricultural product collection centers, professional cold chain logistics service providers, and agricultural product processing enterprises at the raw material front end. It is a key link in maintaining freshness, extending shelf life, and achieving premium pricing before products enter trunk transportation and retail stages, effectively connecting decentralized agricultural production with a large-scale, standardized modern cold chain logistics system. In 2025, the production volume of mobile precooling unit is approximately 50,000 units, with an average selling price of approximately US\$20,000 per unit, a gross profit margin of approximately 30%, and a single-line capacity of approximately 1,000 units per year.
