## Abstracts

According to our (Global Info Research) latest study, the global Modular Prefab Substations market size was valued at US\$ 2030 million in 2025 and is forecast to a readjusted size of US\$ 3048 million by 2032 with a CAGR of 6.0% during review period.

A Modular Prefab Substation is a prefabricated, modular power distribution unit that integrates all necessary electrical and control equipment—such as medium- or high-voltage switchgear, transformers, protection and control systems, and auxiliary equipment—inside a factory-built enclosure.

Modular Prefab Substations precisely address the long-standing problems of traditional substation construction, such as lengthy construction cycles, large land areas, and complex on-site construction. Leveraging the core advantages of factory prefabrication and modular integration, over 90% of production and commissioning is transferred to standardized workshops. On-site, only simple assembly is required for immediate deployment. This significantly shortens construction time and reduces land use and infrastructure costs. Furthermore, its fully enclosed structure and intelligent monitoring system allow it to adapt to complex environments such as high salt spray and extreme cold, perfectly meeting the stringent requirements of urban power grid upgrades and new energy grid integration. This "plug-and-play" characteristic not only resolves the contradiction between traditional models and intensive land development, but its green and low-carbon design also achieves carbon reduction throughout its entire lifecycle through energy-saving components and modular recycling, precisely responding to the energy transition requirements under the "dual carbon" goal. With the accelerated construction of new power systems, the demand for offshore wind power, smart microgrids, and industrial park expansion continues to grow. Coupled with the deep

integration of intelligent technologies and prefabricated modules, Modular Prefab Substations are evolving from an "efficient solution" for power grid construction to a "core node" of the energy network. Their market space will continue to expand as the global energy transition deepens, and their development prospects are clear and full of potential.

In 2025, global Modular Prefab Substations production reached approximately 1,380 Units, with an average global market price of around 1.42 M USD per Unit.

The upstream core components of the Modular Prefab Substation primarily include switchgear and transformers, with typical suppliers including Siemens, ABB, Hitachi Energy, and Eaton. Its downstream applications are primarily in the industrial, public utility, and new energy sectors. The production capacity of an Modular Prefab Substations per line varies depending on the scale of the production line, the degree of equipment automation, and the factory's design efficiency. Typical annual production capacity is 3-5 units, with a gross profit margin of 20%-30%.
