The Modular Radial Head is a surgical implant designed for treating elbow joint injuries, particularly severe radial head fractures, degenerative joint conditions, or functional reconstruction after radial head resection. Made from high-performance materials like cobalt-chromium alloy or titanium alloy, the system ensures durability, biocompatibility, and restoration of joint functionality. With a modular design, it offers various sizes and shapes to accommodate different anatomical structures, supporting precise implantation and postoperative stability. This surgical solution effectively alleviates pain, restores elbow mobility, and improves upper limb functionality.
