According to our latest research, the global Molecular Cloning Services market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Molecular cloning service is a biotechnology service that aims to insert the target gene into a cloning vector through in vitro recombination methods to form a recombinant cloning vector, and replicate and amplify it in an appropriate host. In molecular cloning services, customers usually need to provide original samples, information about the target gene, and experimental requirements. The service provider is responsible for completing the entire molecular cloning process and providing high-quality clone products. These products can be used for subsequent gene function research, protein expression, virus packaging, cell therapy, mRNA vaccines and other applications.
