Mortuary shelving units are important equipment used to place corpses in the morgue, providing a safe and stable storage location for corpses. They can effectively prevent corpses from sliding or moving, ensuring that the corpses are properly placed in the morgue. Mortuaries usually have limited space, and the design of shelves can make full use of vertical space to increase the number of corpses stored. Through reasonable layout and planning, more corpses can be placed in a limited space, improving the efficiency of the morgue. Shelves are usually made of corrosion-resistant and rust-proof materials, which can effectively protect corpses from the influence of the external environment. At the same time, the design of shelves can also prevent corpses from directly contacting the ground or other objects, reducing the risk of damage to the corpse.
