The Mounted Mould Board Plough is an agricultural tillage equipment specially designed for tilling the land, especially for loosening, tilling and improving soil structure. It cuts, turns and buries the soil underground through the plough body (usually made of metal) to create a soil environment suitable for sowing. The mounted plough is installed at the rear of the tractor, driven by the tractor's power take-off system (PTO), and the depth and angle are controlled by a mechanical device. This equipment has efficient tillage performance and can handle different types of soil, including clay, sand and rocky soil. It is an indispensable tillage tool in traditional agriculture.
