According to our (Global Info Research) latest study, the global MOV Metal Oxide Varistor market size was valued at US\$ 1683 million in 2025 and is forecast to a readjusted size of US\$ 2923 million by 2032 with a CAGR of 8.3% during review period.

MOV Metal Oxide Varistor is a nonlinear resistance element with zinc oxide (ZnO) as the main component. Its resistance is sensitive to changes in applied voltage. Specifically, below the threshold voltage, the resistance is very high and the current flowing through is extremely small, which is equivalent to a closed valve; when the voltage exceeds the threshold, the resistance drops sharply and the current flowing through surges, which is equivalent to an open valve. Using this characteristic, MOV can suppress abnormal overvoltages that often occur in circuits and protect circuits from damage caused by overvoltages.

The global metal oxide varistor (MOV) market is large and continues to grow. It is expected that in the next few years, with the popularization of electronic devices and the development of the new energy industry, the market demand for MOV will further increase.
