According to our (Global Info Research) latest study, the global MRI Superconducting Magnets market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

MRI superconducting magnets are a key medical device component that uses the resistance-free properties of superconducting materials at low temperatures to generate a strong, stable and uniform magnetic field for high-resolution in vivo imaging. MRI technology relies on strong magnetic fields and radio frequency waves to excite hydrogen nuclei in the body, and the generated signals are processed by computers to form detailed anatomical images. MRI superconducting magnets are mainly composed of superconducting coils, cryogenic systems and magnet shells.
