A Multi-Factor Authentication (MFA) Smart Card, also known as a smart card token or a security token, is a physical device used in cybersecurity to enhance the security of user authentication. It combines the use of something the user knows (e.g., a PIN or password) with something the user possesses (the physical smart card) to provide an additional layer of security during the authentication process. This approach significantly strengthens the security of digital systems and protects sensitive information.

The primary focus of MFA Smart Card development has been on improving security. This includes the use of more advanced cryptographic algorithms, hardware-based security modules, and enhanced tamper resistance to protect the data and keys stored on the smart card.
