The multi-parameter intensive care monitor is a medical device that can provide important patient information for medical clinical diagnosis. It can detect important physiological parameters such as human ECG signals, heart rate, blood oxygen saturation, blood pressure, respiratory rate and body temperature in real time by integrating multiple functional modules. The monitoring of these parameters is of great significance for the assessment of patients' vital signs, disease monitoring and timely treatment measures. The multi-parameter monitor not only has the functions of monitoring alarm, information storage and transmission, but also can provide medical staff with more comprehensive and convenient monitoring methods through the development of intelligence and wireless.

With the continuous expansion of the global healthcare market, the market demand for multi-parameter monitors, as an important part of the medical equipment market, is also increasing year by year.
