Abstracts

According to our (Global Info Research) latest study, the global Multi-Sample Vapor Sorption Analyzer market size was valued at US\$ 422 million in 2025 and is forecast to a readjusted size of US\$ 693 million by 2032 with a CAGR of 7.3% during review period.

In 2025, global production of multi-sample vapor sorption analyzers reached approximately 4.8 thousand units, based on an average market price of around US\$ 85,000 per unit. Industry gross profit margins generally ranged from 45% to 65%, reflecting high value added from precision sensing, environmental control accuracy, and advanced data analysis software. Global production capacity in 2025 was estimated at about 6.0 thousand units, indicating sufficient manufacturing capability to support expanding demand from materials science and pharmaceutical research.

Multi-sample vapor sorption analyzers are analytical instruments designed to measure vapor adsorption and desorption behavior of materials under controlled humidity and temperature conditions. By testing multiple samples simultaneously, they provide high-throughput characterization of hygroscopicity, diffusion kinetics, and stability for powders, polymers, and porous materials.

The industrial chain includes upstream sensors, microbalances, humidity and temperature control modules, chambers, and electronic components. The midstream focuses on instrument assembly, control software development, calibration, and validation. Downstream applications mainly involve pharmaceutical research, materials science laboratories, chemical R&D, and academic institutions.
