According to our (Global Info Research) latest study, the global Multifunctional Low Voltage Health Care Electric Blanket market size was valued at US\$ 591 million in 2024 and is forecast to a readjusted size of USD 772 million by 2031 with a CAGR of 3.9% during review period.

The multifunctional low-voltage health care electric blanket has the following advantages:

The first is safety, high efficiency and energy saving. The product adopts electronic frequency conversion isolation transformer circuit to isolate and step down the 220V voltage, and the 24V voltage and 220V voltage for the heating wire are magnetically coupled to become two independent loops, ensuring that the product is isolated from the 220V voltage during operation, reflecting With the characteristics of low-voltage safety, short-circuit and open-circuit protection devices are designed in the circuit. After the load is short-circuited, the power supply is automatically turned off and no voltage is output. After the short-circuit fault is eliminated, the circuit can still work normally. The heating element adopts a new type of alloy heating wire, which has low resistance, high conductivity, high thermal efficiency and fast temperature rise.

The second is temperature control and temperature control. The temperature control switch adopts dual-channel dual-temperature dual-control. The same electric blanket can be controlled in two different temperature zones according to different needs, so that the temperature of the two sides can be the same as high and low, or it can be One high and one low, to achieve the control function of the temperature difference between two people. The temperature control switch can control two electric heating wires

respectively, and the temperature rise can be controlled within the range of 15~45 °C, which has the functions of temperature regulation, temperature control, warmth retention and cold reduction to meet the needs of the human body.

Electric blankets consume less power, have adjustable temperature, are easy to use, and are widely used. They have a history of more than 100 years. Compared with heating equipment such as air conditioners and small suns, electric blankets are economical and have been popular with consumers for a long time, and their sales have risen sharply. However, with the growth of residents' income and the improvement of safety awareness, the total supply of the electric blanket industry tends to be saturated after the initial rapid expansion.
