According to our (Global Info Research) latest study, the global Multifunctional Road Inspection Systems market size was valued at US\$ 405 million in 2023 and is forecast to a readjusted size of USD 574 million by 2030 with a CAGR of 5.2% during review period.

Roads continue to deteriorate on a daily basis because of the wear and tear associated with the variety of vehicles driven on them. The deterioration of road surface quality not only impairs the comfort of drivers, but also impacts economic efficiency. Road Inspection Systems, which mounted on general vehicles or special vehicles, are used to detect the rate of cracks, rutting depth and flatness etc. They play an important role in social infrastructure construction and can ensure that defective roads maintained in time. Road Inspection Systems are the integration of software and sensors etc. They usually consist of laser measuring instrument, camera, IMU, GPS and image analysis software etc.

Highway traffic is one of the important symbols of a country's development degree and an important infrastructure supporting economic, political and cultural construction. Among them, highway is an important foundation for building traffic modernization. The United States and other developed countries have well-developed highway facilities and high coverage, which have been built into a highway network. With the accelerating pace of road construction, subway construction and underground space development, urban vehicles increase sharply. At the same time, local unevenness, local potholes, pavement cracks and other phenomena occur from time to time due to the increasing traffic flow, pavement aging, subgrade settlement, rainwater scouring and other reasons. When the situation is serious, it will lead to cracking, deformation, settlement Collapse and other problems, which affect the vehicle speed and driving comfort to

varying degrees. Some road subgrade structures are damaged, which will affect the driving safety, even cause traffic accidents, and have a great impact on the society. Therefore, it is particularly important to actively carry out the detection and control of urban road diseases and reduce the traffic problems caused by road diseases through effective detection means.

Manual inspection of roads makes the inspection and repair process very slow. In order to solve this problem, vehicle mounted road inspection systems is adopted. With using the stereo cameras, artificial intelligence, machine learning etc. ,the technology of Road Inspection Systems is becoming more and more mature.
