Abstracts

According to our (Global Info Research) latest study, the global Multilayer Piezoelectric Actuators market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Piezoelectric actuators are ceramic elements used to convert electrical energy into mechanical energy such as displacement or force by utilizing the piezoelectric longitudinal effect. A piezoelectric actuator converts an electrical signal into a precisely controlled physical displacement (stroke). If displacement is prevented, a useable force (blocking force) will develop. The precise movement control afforded by piezoelectric actuators is used to finely adjust machining tools, lenses, mirrors, or other equipment. A piezo actuator can be used to control hydraulic valves, act as a small-volume pump or special-purpose motor, and in other applications requiring movement or force. There are many applications where a piezoelectric actuator may be used, such as ultraprecise positioning and in the generation and handling of high forces or pressures in static or in dynamic situations.

The global Piezoelectric Actuators revenue was US\$ 882 million in 2022 and is forecast to a readjusted size of US\$ 1266.3 million by 2029 with a CAGR of 5.1% during the forecast period (2023-2029).

Global 5 largest manufacturers of Piezoelectric Actuators are Physik Instrumente (PI) Group, TDK, Murata Manufacturing, KEMET (TOKIN Corporation) and CTS (Noliac), which make up about 59%. Among them, Physik Instrumente (PI) Group is the leader with about 22% market share.

Europe is the largest market, with a share about 27%, followed by North America and

China, with the share about 25% and 18%.
