A multimodal digital subtraction angiography (DSA) system is an advanced medical imaging device that integrates multiple imaging techniques (such as digital subtraction angiography, CT, MRI, etc.) to provide detailed visualization of vascular structures and functions. This system enhances image clarity by comparing images taken at different time points, effectively removing background interference to reveal lesions or abnormalities within the vessels. The multimodal DSA system is widely used in fields such as cardiovascular disease, neurointervention, and tumor treatment, offering more accurate diagnostics and treatment guidance.
