Culture medium refers to artificially prepared nutrients for the growth and maintenance of microorganisms, plant tissues and animal tissues. Generally, the main components include carbohydrates, nitrogen-containing substances, inorganic salts, trace elements, vitamins and water. Some culture media also contain antibiotics and pigments for the cultivation and identification of single microorganisms. Mycoplasma semi-fluid culture medium can be liquid or solid. Liquid specimens can be used directly, and solid specimens need to be dissolved with an appropriate amount of sterile saline before taking the solution for use. Decide whether to use the 10-fold dilution method for dilution based on the concentration required.
