Nano silver paste is a conductive paste containing silver particles at the nanoscale, typically composed of silver powder, additives, resins, and solvents. Due to the extremely small size of the silver particles, nano silver paste exhibits excellent conductivity, thermal stability, and good adhesion. It is commonly used for soldering and packaging high-precision electronic components. Nano silver paste is widely applied in printed circuit boards (PCBs), flexible circuits, LED packaging, solar cells, sensors, and other microelectronic devices, offering higher performance and finer soldering precision.
