Near patient care diagnostics refer to medical diagnostic procedures that are performed at or near the location of patient care, rather than in centralized laboratories. This approach allows for faster, more immediate results, enabling healthcare providers to make quicker decisions regarding diagnosis and treatment. Near patient care diagnostics typically include point-of-care testing (POCT) devices and systems that are designed for use in various healthcare settings, such as hospitals, clinics, physician offices, or even in the home. Common examples include blood glucose meters, pregnancy tests, and portable imaging devices. These diagnostics provide convenience, reduce patient wait times, and improve clinical outcomes by facilitating timely interventions.
