## Abstracts

According to our (Global Info Research) latest study, the global Neutral Calcium Sulfonate market size was valued at US\$ 389 million in 2025 and is forecast to a readjusted size of US\$ 533 million by 2032 with a CAGR of 4.7% during review period.

Neutral calcium sulfonate is a petroleum sulfonate derivative, primarily used as a lubricant additive. It exhibits excellent cleaning, dispersing, rust-inhibiting, and neutralizing properties, effectively removing engine carbon deposits, neutralizing acidic substances produced during combustion, and protecting the engine from corrosion. It is commonly used in engine oils and high-performance greases. The main upstream raw materials are heavy alkylbenzene sulfonic acid or petroleum sulfonic acid, and calcium hydroxide. Alkylbenzene, as a downstream product of petrochemicals, has a molecular weight distribution and long-chain alkyl structure stability that directly affect the oil solubility of calcium sulfonate. In 2025, the global sales volume is projected to be approximately 98,000 tons, with an average market price of approximately US\$3,856 per ton. The industry's gross profit margin is approximately 10-25%.
