## Abstracts

According to our (Global Info Research) latest study, the global NEV SiC MOSFET Module Baseplate market size was valued at US\$ 93.68 million in 2025 and is forecast to a readjusted size of US\$ 305 million by 2032 with a CAGR of 18.1% during review period.

An NEV SiC MOSFET module baseplate is the structural heat-spreading foundation at the bottom of an automotive-qualified SiC power module (e.g., traction-inverter phase-leg/six-pack). It spreads heat from the DBC/AMB stack to the cooling interface and provides mechanical mounting/warping control for reliability. It ranges from flat baseplates used with TIM to advanced single-side direct cooling pin-fin baseplates for higher power density and lower thermal resistance.

Upstream covers metals/MMCs, plating chemicals (e.g., Ni/NiP), and joining/interface consumables; midstream includes forming + precision machining, pin-fin/direct-cooling feature fabrication, plating/corrosion protection, and automotive qualification (thermal/power cycling). Downstream integrates into SiC module packaging and system cooling (direct-cooled baseplates fundamentally change the thermal interface).

In 2025, global NEV SiC MOSFET module baseplate production reached approximately 7.5 million units, with an average global market price is \$11 per unit.
