New energy marine DC charging piles are DC charging infrastructures specifically designed for electric ships, ferries, and other marine vessels. This equipment provides fast and efficient charging while integrating intelligent monitoring, energy management, safety protection, and grid communication functions. It supports zero-emission shipping operations, dynamic load management, and real-time monitoring, enabling ports to meet the growing electrification and environmental protection demands. The new energy marine DC charging pile industry chain includes upstream power electronic devices, high-voltage connectors, transformers, control modules, and software systems; midstream equipment assembly, system integration, calibration, and testing; and downstream applications covering commercial ports, passenger terminals, ferry operators, and inland waterway shipping. Supporting services include installation and commissioning, grid connection, preventative maintenance, and software upgrades to ensure long-term reliable, safe, and efficient operation of the equipment. The gross profit margin of major companies in the industry ranges from 25% to 45%. In 2025, the global production of new energy marine DC charging piles was approximately 1,754 units, with a global average market price of approximately US\$280,000 per unit. In 2025, the global production capacity of new energy marine DC charging piles was approximately 2,339 units.
