## Abstracts

According to our (Global Info Research) latest study, the global Nicotine market size was valued at US\$ 648 million in 2024 and is forecast to a readjusted size of USD 873 million by 2031 with a CAGR of 4.4% during review period.

Nicotine( $C_{10}H_{14}N_2$ ), with molecular weight of 162.24, specific gravity of 1.0097 and boiling point of 247 $^{\circ}$ (745 mmHg), is a colourless or slightly yellow oily liquid, which has rich hygroscopicity and is soluble in water, alcohols, ethers, chloroform and oils. The products must be packaged and stored under the protection of inert gas and light-avoiding environment, for nicotine is easy to become brown and oxidized in air or under light. Nicotine's water solution is alkaline, which can form a salt with any kind of acid with 10.2 PH value of 0.05 mol.

Nicotine belongs to the pyridine alkaloid family. Due to its special physical and chemical properties, the production and use of nicotine are becoming more and more extensive, and it has broad development prospects. Nicotine can be divided into 95%, 99 and other types according to purity. According to the source, nicotine can be divided into natural nicotine and natural extracted nicotine.

In terms of its application, electronic cigarette oil is its largest application field, accounting for about 80% of the market share; followed by the pharmaceutical industry and biological pesticides.

From a global perspective, the global concentration of nicotine is relatively high. The main production and sales areas of nicotine are in China, Europe and the United States, and the consumption areas are mainly concentrated in developed countries such as Europe, the United States and Japan.
