Abstracts

According to our latest research, the global NMP Recycling Solution market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

The burgeoning manufacturing capacity of EV batteries is creating a corresponding surge in demand for raw materials, including chemicals like N-Methyl-2-pyrrolidone (NMP) and other solvents. NMP is a versatile solvent with a wide range of industrial applications, including pharmaceuticals, petrochemicals, and microelectronics. Crucially, it also plays a significant role in manufacturing a type of cathode used in lithium-ion batteries. NMP offers several advantages: a high flash point, excellent solubility, and low volatility. It can also be recycled, which can significantly reduce the cost of replenishing the supply. This recycling is done through a multi-stage distillation process that can recover up to 95% of the used solvent. However, it's worth noting that the recycling process can be complicated due to certain factors. One of these is that NMP needs to be distilled at controlled temperatures because it becomes flammable at higher temperatures, posing an explosion risk.
