According to our (Global Info Research) latest study, the global Non-absorbable Dural Patch market size was valued at US\$ 46.5 million in 2023 and is forecast to a readjusted size of USD 53.1 million by 2030 with a CAGR of 1.5% during review period.

Non-absorbable dural patches are surgical patches made from materials that do not break down or get absorbed by the body over time. These patches are used to repair or reinforce the dura mater and provide long-term structural support. Non-absorbable materials are typically synthetic, offering enhanced durability in critical areas.

Long-Term Structural Support:

Non-absorbable dural patches are essential for cases where long-term durability and mechanical support are required. They are commonly used in complex or large-scale surgeries where the dura needs to remain intact for an extended period.

Growing Demand in Neurosurgery:

The increasing complexity of neurosurgeries, particularly for traumatic brain injuries and spinal disorders, is driving the demand for non-absorbable patches that provide enhanced stability during the healing process.

Improved Materials and Performance:

Research and development efforts focused on enhancing the properties of non-absorbable materials, including increasing their flexibility, biocompatibility, and infection resistance, present significant growth opportunities.

Global Neurosurgery Expansion:

As neurosurgical procedures expand in both developed and developing markets, the demand for long-lasting solutions like non-absorbable dural patches is expected to rise.

Risk of Chronic Inflammation:

While non-absorbable patches offer durability, they may increase the risk of chronic

inflammation or tissue rejection, especially if not integrated well with the surrounding tissue.
