Non-adhesive liquid embolic materials refer to a type of liquid preparation that can quickly transform into a solid or gel state in a blood vessel, but will not firmly adhere to the blood vessel wall or other tissues, thereby achieving the purpose of embolizing blood vessels, isolating blood, or embolizing diseased blood vessels. When this type of material forms an embolism in a blood vessel, it can maintain a certain fluidity and stability, while reducing damage and adhesion to surrounding tissues. Non-adhesive liquid embolic materials are widely used in the treatment of vascular diseases, such as cerebral arteriovenous malformations, aneurysms, and tumor vascular embolism. Its non-adhesive properties can reduce damage to normal tissues during treatment, improve treatment effects and patients' quality of life.
