Non-heated bubble humidifiers are devices that increase air humidity by generating bubbles in water using airflow, without relying on electric heating elements. They are commonly used in medical oxygen therapy to deliver humidified oxygen to patients, preventing dry oxygen from irritating the respiratory tract. These humidifiers feature a simple design, easy operation, and safe usage, while eliminating the risks of burns and energy consumption associated with heating components. They are widely utilized in hospitals and home care settings, particularly for continuous low-temperature humidification needs.
