## Abstracts

According to our (Global Info Research) latest study, the global Non-Oxidation Annealing Furnace market size was valued at US\$ 525 million in 2024 and is forecast to a readjusted size of USD 682 million by 2031 with a CAGR of 3.8% during review period.

The non-oxidation annealing furnace is a kind of equipment used for annealing of metal materials. Its main feature is to prevent the oxidation of the metal surface by controlling the atmosphere in the furnace to avoid oxygen contact with the metal surface. This type of furnace usually uses inert gas (such as nitrogen or argon) or reducing gas (such as hydrogen) as the atmosphere in the furnace to anneal, soften, and relieve stress of the metal at high temperature to ensure that the metal surface is smooth and free of oxide layer. Non-oxidation annealing furnaces are widely used in the heat treatment of metal materials such as stainless steel, copper, and aluminum, and are particularly suitable for workpieces with high surface quality requirements.
