## Abstracts

ABPM measures blood pressure at regular intervals (every 15-30 minutes is typical) throughout the day and night. It is especially useful for patients in the following groups:

To evaluate suspected white-coat hypertension in patients with hypertension and no target organ damage.

Apparent drug resistant hypertension

Hypotensive symptoms with antihypertensive medications

Episodic hypertension

Autonomic dysfunction

Because blood pressure is monitored during sleep, ABPM is useful to determine whether the blood pressure falls at night compared to daytime values. A night time fall is normal. Absence of a night time dip is associated with increased cardiovascular disease risk and other endorgan damage
