Abstracts

Fully automatic biochemistry analyzer (FABCA) is a high performance micro-controller based Photometric biochemistry analyzer used to measure various blood biochemical parameters such as blood glucose, urea, protein, and bilirubin etc. that are associated with various disorders such as diabetes, kidney diseases, liver malfunctions and other metabolic derangement's. The quantization of these parameters is helpful in diagnosing health disorder. In the proposed project work, it is planned to automate the filter selection, sample aspiration, auto-calibration and other related parameters to be controlled through micro-controller based hardware and software system. It is proposed to automate the sample handling system to cope up with the large no. of blood sample at a time. The modular design of automatic biochemistry analyzer (ABC) analyzer facilitate to be controlled via laptop or PC by using
