Abstracts

'Cloud computing describes wide range of useful services.

For example, cloud computing allows you to move compute and data services off-site to a location-transparent facility.

Cloud-based data can be made accessible via the Internet anytime, anywhere and is often less costly than locally hosted data.

To decide how you – or your organization – will use cloud computing to best advantage, it is important to understand the services that make up cloud computing.

The three major categories of services are Software as a Service (SaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS).'
