Abstracts

'DSL or digital subscriber line is a family of technologies that provide digital data transmission over the wires of a local telephone network.

1. DSL is available in every region of the world, and ADSL owns the majority of the market though VDSL and ADSL2plus are gaining ground
2. DSL is capable of providing up to 100 Mbp, and supports voice, video and data.
3. The new DSL network is IP-centric
4. There is broad equipment interoperability and there are currently established test specifications for ADSL, ADSL2plus, SHDSL, and soon VDSL2 will join the list
5. Finally, ADSL and home networking are a natural fit as DSL effectively supports multiple applications for multiple uses via each DSL connection.'
