Abstracts

The Electric Handpieces is an instrument that uses electricity to generate a rotary cutting motion, similar to how a drill operates. Often, handpieces are organized by speed range (high speed or low speed) which determines the applications that are suitable. Typical high speed applications include cutting tooth structure and finishing restorations while low speed handpieces have a range of applications including endodontics, implantology, caries removal and prophylaxis. Electric handpieces offer the advantage of more torque, which can translate to smooth, consistent cutting ability across a wide range of speeds.
