Abstracts

This report studies the Electric Wheelchair market, A motorized wheelchair, powerchair, electric wheelchair or electric-powered wheelchair (EPW) is a wheelchair that is propelled by means of an electric motor rather than manual power. Motorized wheelchairs are useful for those unable to propel a manual wheelchair or who may need to use a wheelchair for distances or over terrain which would be fatiguing in a manual wheelchair. They may also be used not just by people with 'traditional' mobility impairments, but also by people with cardiovascular and fatigue based conditions. Centre wheel drive electric wheelchair is used in the smaller space with good flexibility, but the front wheels on uneven terrain conditions or the rear wheel is easily caused stagnation of wheelchair card.
