## Abstracts

The flight control computer is at the core of any modern aircraft, both manned and unmanned. In both cases the typical flight control computer drives the primary flight control surfaces to drive the flight path of the aircraft but also provides finer control for stability. Given the criticality of this function these computers are often used in a dual or triple redundant configuration and subject to strict compliance to safety standards for software and hardware such as DO-178C and DO-254.
