Abstracts

High speed motor usually refers to the motor with rotation speed over 10000 rpm. They have the following advantages: Due to their high speed, so the motor power density is high, and power volume is far less than ordinary motor, can effectively save material. Secondly, it is can be connected to the prime mover, cancelled the traditional retarding mechanism, high transmission efficiency, low noise. Also, due to the high speed motor moment of inertia is small, so the dynamic response is fast.
