Abstracts

Microfiber is synthetic fiber finer than one denier or decitex/thread. However, recently, there is no uniform definition of international fine fibers. In Japan, microfiber is less than 0.3 dtex. German Textile Association monofilament polyester fiber linear density of less than 1.2 dtex, polyamide fiber linear density of less than 1.0 dtex is called superfine fibers; and Montefibre company 's linear density of less than 0.55 dtex polyester fiber called microfiber; US PET Commission defines that 0.3 dtex ~ 1.0 dtex fiber is defined as ultra-fine fibers; AKZO company believes microfiber upper limit should be 0.3 dtex, but most people accepted definition dpf 1.0 dtex fibers are microfibers and dpf 0.1 dtex fibers called ultrafine fibers. In china microfiber is less than 2.2 dtex and most global manufacturers produce the microfibers that are less than 0.3 dtex.
