Abstracts

Nitric acid is poisonous liquid that gives off choking red or yellow fumes in moist air. It is a strong oxidizing agent. It ionizes readily in solution, forming a good conductor of electricity. It is miscible with water in all proportions. Nitric acid is a clear to slightly yellow aqueous solution that has been treated to remove most free nitrogen oxides. This highly corrosive intermediate chemical is a strong mineral acid used in the production of nitrate based fertilizers, nylon precursors and other specialty chemicals. In this report we converting the different concentration of nitric acid into 100, namely in this report we counting the nitric acid(100%)'s capacity, production price and other items.
